

# Assignment 1 Notes

Read these notes – they are important!

Read these instructions and suggestions in the report template and understand the assessment rubric! Sections from the progressive (partial) submissions must be improved and included in the final submission. We will not look at your progress submissions until we mark the final submission.

Any requests for extensions will only be granted if quality weekly progressive submissions are made. The first progressive submission must be improved and resubmitted with the final submission - use the full report template.

Only the contents according to the page limits of the report template will be assessed. Any part which is missing in the report or beyond its page limit gets zero marks. We will not look for anything that was missing from your report in your Altaire AI Studio scripts.

However, we will check the Altaire AI Studio scripts for consistency with your report and to ensure an authentic effort. Use comments in your Altaire AI Studio process(es) to enable assessors to follow your logic.

A professional analytics report is evidenced-based, not speculative! Anything reported that is not substantiated by Altaire AI Studio scripts will be marked as zero.

Create new versions your processes as you work on them (i.e., include a version number as part of the filename when you save it, e.g. “my-process-V1.rmp”, “my-process-V2.rmp”). You must save all your Altaire AI Studio process files in the repository that you created in week one on your H:drive. Failure to do so will not be accepted as a reason for seeking extensions.

The report font and size must be: Arial 10 points.

If the submitted files are corrupted, in the wrong format or irrelevant, zero marks will be given. Only assignments received via the CloudDeakin submission box before the deadline will be marked. Do NOT submit assignments via email as these cannot be assessed against the assignment rubric. Approved extensions in line with Deakin policy will result in deadlines redefined for individuals.

Your Altaire AI Studio script must be developed so that they can be run independently by assessors. Therefore, do NOT create intermediate data stores, or modify the provided dataset for the assignment outside of Altaire AI Studio. Use the “Read Excel” operator as the first step in your process(es) to load the provided dataset.

Submission format: Submit two separate files:

1. Your report, according to the template in PDF format.
2. Final versions of all your Altaire AI Studio scripts (\*.rmp files) compressed as a single ZIP file.

This is an individual assignment. The Deakin policy on Academic Integrity applies.
